

# TOP 10 TIPS

## FOR SAVING WATER

Quadvest, a family-owned and operated water and sewer utility, is sharing the top ten ways consumers can help to conserve water. From using short blasts of water while doing dishes instead of leaving the water running to strategic ways to water your lawn, there are solutions that fit the needs of any family.

### 1) TIME YOURSELF

Install water-saving shower-heads and try to limit your showers to four minutes

### 2) FILL WISELY

Use full loads in your dishwasher and washing machine, use an "Eco" setting when possible.

### 3) TRASH IT

Do not use your toilet as a place to dispose of rubbish such as used face cloths or cigarette butts, etc. - use the bin.

### 4) CHECK THE PIPES

Check and repair all possible leaks from the toilet to the taps and pipes

### 4) FLUSH ONCE

Install a dual-flush toilet

### 6) LIMIT WATER USAGE

Do not leave water running for:

Brushing your teeth

Shaving  
(fill the sink)

Washing Dishes  
(fill the sink)

### 7) WATER SMART

Water the garden or other plants around the home at times of least evaporation such as early in the morning and late in the evening.

### 8) BE RESOURCEFUL

Install a collection tank for the eve-shoots of your home. This can be used for toilet water or gardening.

### 9) SKIP THE WAIT

Do not wait for the tap to run to get cooler water, keep some water refrigerated instead.

### 10) BUCKET OF SUDS

Use buckets for cleaning floors, windows and cars.
